THE CONTINUOUS OXIDATION BY ALTERNATING CURRENT OF ANODE FOIL FOR ELECTROLYTIC CAPACITORS (Neprepyvnoye Oksiditrovaniye Peremennym Tokom Anodney Fol'gi dlya Elektroliticheskikh Kondensatorov). Jan 61 [15]p. 7 refs. RTS 1664.
Order from LC or SLA mi$2.40, ph$3.30 61-15392

Trans. of Elektrichestvo (USSR) 1959, no. 6, p. 71-76.

Tests showed that dynamic forming of anode foil for electrolytic capacitors by ac is best carried out with the baths cross-connected. Baths of existing construction are suitable provided that they are made of material not subject to forming (for example, stainless steel grade 1Kh18N9T). The greatest stability of forming conditions is achieved when the same foil is passed through successive baths connected back to back.
